

C3LX – Frontend/Mobile Software Engineer (React, React Native)

Location: Broomfield, Colorado – Greater Denver Area

Contact: angelarichburg@c3lx.com

Your role:

You are responsible for taking the lead on frontend software engineering projects with limited supervisory oversight. You work collaboratively with product owners and engineers to deliver fronted elements for both web-based and mobile applications. You support the development of mission critical features and solutions, playing a key role in the company's ability to grow and have a larger impact on the future of healthcare. You share the vision of creating a better and complete health engagement system.

In this position, you will:

- Lead frontend web and mobile engineering projects, vetting requirements and recommending the best technology options based on needs and requirements.
- Work directly with the product owners to understand project requirements and limitations.
- Vet technology requirements and architect solutions, working directly with designers and backend engineers in identifying technical limitations and workarounds.
- Implement new features and update existing features as prioritized by the product team.
- Review current code and provide recommendations to the engineering team and leadership on how to improve it.
- Attend regular project review and status report meetings.
- Work simultaneously on multiple projects in various capacities, leading and individual contribution.
- Provide estimates on tickets, including scope of work and timeline for completion.
- Conduct code reviews on pull requests in a timely manner.
- Handle advanced level support tickets; troubleshooting and providing solutions to issues and bugs.
- Provide mentorship and support for Junior Software Engineers.
- Support the QA team with testing as needed in front and back end frameworks.
- Review and update ticket requirements for proper acceptance criteria and testing instructions.

Skills, experience, and qualities that will help you be successful:

- 3+ years of experience in design and execution of frontend and/or mobile development.
- Expertise in React Native and React.js.
- Proficiency in JavaScript/ES6 and TypeScript.
- Expertise in Jest or equivalent testing framework.
- Experience with Agile methodology.
- HIPAA proficiency for healthcare data or the willingness to gain this proficiency.
- Stay current on industry trends and new technologies.
- Adaptable and self-driven, working cross-functionally to reach common goals.
- Excellent written and verbal communication. Able to interact and communicate productively with both technical and non-technical audiences.
- Being kind in feedback and interactions with the team to support a collaborative and innovative environment.
- Thrive in an open office environment.
