

Position: Full Stack Software Engineer

Report to: Technical Director

FLSA Status: Exempt

Your role:

As a Full Stack Software Engineer at C3LX, you will help shape and build software that is a critical part of revolutionizing healthcare. Our focus is on building a modern platform that enables us to move quickly over time. This means a willingness to rethink the healthcare domain, participate in the key platform decisions, and collaborate well across our technical and non-technical teams.

At C3LX we use Golang on the server-side. On the frontend we use React/React Native/Redux. We deploy services utilizing Docker to cloud providers. We integrate with various external services and store the bulk of our data in Postgres.

In this position at C3LX, Inc:

- We work closely with our entire team on our product and future roadmap. You will participate in product discovery and design thinking, and then help translate plans into modern, scalable, architecture.
- We are working to transform healthcare through remote monitoring and patient engagement. You will be a part of the team to launch new mission-driven features to enable care teams and engage patients as we seek to be a critical component of the transformation of healthcare.
- We work across organizational boundaries on a daily basis. You will work with Product Managers and key internal and external stakeholders to collaboratively prioritize features and functions for the engineering team.
- Sometimes we can't do it all. You will help evaluate and communicate tradeoffs for architectural designs, development approaches, and technical debt in relation to business needs for project leads, managers, and executives.
- Your experience will help grow other members of our team. At C3LX, you will get to share your experience and knowledge through mentorship and collaboration within and across teams. You will get to grow and develop as well.
- We work diligently to build quality in to our products, and you will support the QA team with testing and support as needed.
- We are all close to our product and to each other. We act and make decisions as owners.

Skills, experience, and qualities that will help you be successful:

- 3+ years of professional development experience.
- You have experience with a backend language such as: Golang, Java, C#, Ruby, Python, etc.
- You have some familiarity with Golang or are excited to learn it.
- Experience with server-side concepts, e.g. microservices, database, caching, performance, monitoring, and scalability.
- Professional experience in React/Redux desirable, bonus points for experience in React Native.
- Work experience with databases such as PostgreSQL.
- You are passionate about being a part of the solution to our broken healthcare system.
- We work closely as a team, so if you are the right person, you value and demonstrate great teamwork.
- We grow together. If you have and value leadership and/or mentorship experience, you'll like it here.
- We are GDPR and HIPAA compliant, and privacy and security are big issues in our field today. Your experience in privacy and security for cloud based applications and healthcare data would be a plus.
- You value our values. We work hard at C3LX to live our values. We don't do it perfectly, but we attend to them constantly. If you come here, we want you to lean in and engage with us and live our values too.
