C3LX – Senior Software Engineer (Full Stack)

Location: Broomfield, Colorado – Greater Denver Area
Contact: angelarichburg@c3lx.com

Your role:

You are responsible for leading complex software engineering projects with limited supervisory oversight. You enjoy the creativity and problem-solving aspects of your work and look forward to opportunities to mentor new professionals in the industry. You are developing mission critical features and solutions, playing a key role in the company's ability to grow and have a larger impact on the future of healthcare. You share the vision of creating a better and complete health engagement system.

In this position, you will:

- Lead complex engineering projects, both internally and externally, recommending the best technology options based on needs and requirements.
- Work directly with the client to understand requirements and issues for external projects.
- Architect solutions and vet technology stacks, working directly with designers in identifying technical limitations and workarounds, shaping best practices for the team going forward.
- Collaborate with the Technical Director on project prioritization and most efficient utilization of internal and external technical resources.
- Attend regular project review and status report meetings.
- Work simultaneously on multiple projects in various capacities, leading and individual contribution.
- Actively work with the project management team to prioritize tickets.
- Provide estimates on tickets, including scope of work and timeline for completion.
- Take lead on critical issues and fixes.
- Conduct code reviews on pull requests in a timely manner.
- Support the QA team with testing as needed in front and back end frameworks.
- Mentor new technical professionals in the company.

Skills, experience, and qualities that will help you be successful:

- 7+ years of experience in design and execution of full stack development.
- Leadership and/or mentor experience.
- Expertise in GoLang, .NET, Ruby on Rails, React.js, Vue.js, mongoDB, Express, Nodejs, HTML/CSS, JavaScript, Git, MS-SQL, Postgres.
- Understanding of Golang, React.js, Redux and experience using Cordova to build mobile applications.
- Experience with Agile methodology.
- HIPAA proficiency for healthcare data or the willingness to gain this proficiency.
- Curious, eager to learn and stay current.
- Adaptable and self-driven, working cross-functionally to reach common goals.
- Excellent written and verbal communication. Able to interact and communicate productively with both technical and non-technical audiences.
- Being kind in feedback and interactions with the team to support a collaborative and innovative environment.
- Thrive in an open office environment.
